Competence in ice preparation

Success Story

Since the company was founded in the year 1986, WESSAMAT has become one of the leading companies for ice makers in Europe due to its high-performance products, innovative technology and a high level of quality and reliability. WESSAMAT offers individual solutions for a wide variety of applications, ranging from compact ice makers, ready to plug-in, for the hospitality industry to high-performance ice preparation plants for industrial ice production. The extensive product range of WESSAMAT offers the ideal ice for every application.

Progress through innovation

For the development of innovative, future-oriented and energy efficient ice preparation techniques, WESSAMAT has been promoted and awarded multiple times in recent decades by the Federal Ministry of Research and Development as well as by the State Government of Rhineland-Palatinate with the innovation prize "SUCCESS" of the state of Rhineland-Palatinate and the grand prize for small and medium-sized businesses 2018 "Großer Preis des Mittelstandes".

Awarded with the prize
Großer Preis des
Mittelstandes 2018

Quality made in Germany

Being the inventor of the unique wave technology for the production of crystal-clear hollow ice cones, WESSAMAT has deliberately chosen the new industrial site "Nord" of the University city Kaiserslautern as production site in Germany when time came for an expansion. This decision is encouraged by securing jobs in the region, the experience and the know-how of the employees in the departments Development, Construction, Production, Service and Sales. The constant strive for perfection, our passion for ice and the high quality expectations of our customers will also in the future be our drive for quality and reliability "Made in Germany".

According to our General Terms of Sale, Rev. December 2015

* All WESSAMAT ice makers except the product lines Smart Line, Flake Line and Nugget Line are manufactured in the factory in Kaiserslautern/Germany.

When planning tailored ice production plants, we are collaborating hand in hand with designers and architects. Being a member of the designer association "Verband der Fachplaner", we are your competent partner for planning your individual projects and complete gastronomy concepts.

Climate-friendly refrigerants

As an innovative, future-oriented company, we feel committed to climate protection and the use of environmentally friendly materials. On the basis of the Regulation which entered into force on 01.01.2015 to reduce greenhouse gas emissions, we use the refrigerants and components available on the market, in order to comply with the limit values and put ice makers on the market with a low GWP-value. Currently, we work with the climate-friendly refrigerant R 290/GWP value 3 (depending on the permitted filling charges) for plug-in ice machines or with the refrigerant R744 (CO₂)/GWP value 1 for ice machines to be connected to central cooling systems. The industry continues to work on the development of climate-friendly refrigerants; however their use in ice machines is dependent on the components that are suitable and available on the market. We are constantly in touch with renowned manufacturers and are monitoring these developments very closely, for being able to offer both, our customers as well as our climate, the best possible solution with the lowest possible GWP value.

The properties and technical data specified in this product program refer to the state of the art at the time of printing. The values specified are standard values, which may differ from the values in practice. WESSAMAT reserves the right to make changes in design. Image sources: WESSAMAT photo archive · Fotolia.

preparation

Types of ice and cooling properties

Hollow ice cones

Hollow ice cones fascinate by their crystal clear optics and particularly aesthetic form. They are easier to handle and to dose than square-sized full cubes and are eye candy in slim cocktails or long drink glasses. Due to the larger surface and the slim form, they release melting water more quickly and thus create a better cooling effect in comparison to full ice cubes.

Full ice cones

Full cones are often used as an alternative to square full ice cubes. Compared to hollow ice cones, they have a larger mass and therefore release the melting water more slowly - just like the full ice cubes. Besides this special cooling feature, the full ice cone is also used for many application purposes in gastronomy due to its cylindrical form.

Full square-sized ice cubes

The square ice cube is considered the embodiment of the classic ice cube. Due to its relatively larger mass, it releases melting water slower when cooling beverages and preparing cocktails and drinks, which again results in a long-lasting cooling effect. Due to the typical form and its cooling properties, it is popular with bartenders and restaurateurs alike.

Micro Cubes

Due to their unique format and particular consistency, Micro Cube fine ice cubes are perfectly applicable for versatile cooling tasks. Because of their dimensions of approximately 7 x 7 x 7 mm and a constant temperature of exactly 0° Celsius, this ice is particularly versatile in use. As a basis in refrigerated counters, for the presentation and display of fish and seafood, fruits, juices and dairy products as well as in the dough production.

Crushed Ice

Real crushed ice is the only true ice for a variety of cocktails and drinks. In comparison to nugget ice, which some manufacturers erroneously describe as crushed ice, real crushed ice is produced by the mechanical milling of ice cubes. In contrast to the milky and fast-thawing flake or nugget ice, real crushed ice has a solid consistency and a brilliant look. Therefore, crushed ice is also ideal for cooling and presenting food and beverages.

Nugget ice

With a temperature of -0.5° Celsius, its consistency and its cooling properties, nugget ice can be used for the preparation of cocktails as well as for many other applications. In comparison to flake ice, it has a more solid consistency and clearer contours. Whenever no real crushed ice is available, nugget ice can be used as an alternative.

Flake ice

In terms of size and form, flake ice is uneven and may be appropriate for different cooling tasks. With a temperature of -0.5° Celsius the crystalline ice flakes are perfectly appropriate for various cooling tasks. Thus, the commodities to be cooled can easily be embedded and gently covered. The ice flakes are easy to shape and are therefore predominantly used for the cooling of asparagus and vegetables, as well as in the laboratory and medical sector and in sauna/spa areas.

Scale ice

Scale ice has a constant temperature of -6° to -8° Celsius and is preferably used for cooling fresh fish and seafood during transportation, processing and presentation. It is also used in butcher shops and by the meat processing industry in the manufacture of sausages.

Tube ice

Tube-Ice is available in different diameters and in various lengths. Due to the ice preparation technology used, tube ice is the more cost-effective alternative to full or hollow ice cubes, in case crystal clear ice in particularly large quantities is required for industrial and commercial applications or for the commercial sale of ice.

Individual types and forms of ice

For particular fields of application and requirements, we are able to offer ice production systems for ice in individual versions (e. g. white or coloured ice cubes) and with different formats. Please contact us for further information.

Real Crushed Ice 11

Whenever ice cubes are mechanically crushed by a grinder, the result is real crushed ice. Real crushed ice is produced by the WESSAMAT ice crushers (page 12-13) or by the ice makers of the product lines Combi Line (pages 30-32) and Cube Line (page 41).

IceCrusher

Practical handling

The grinder of the models C 103/CB 103 to crush the ice cubes is actuated by the locking mechanism of the shaft.

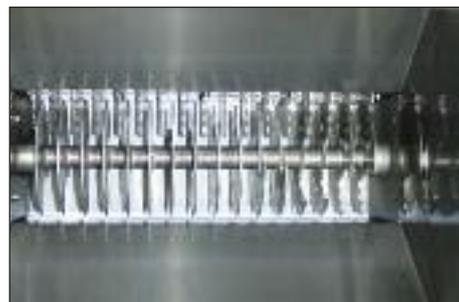

Crushed Ice

Easy take-out

The ground crushed ice accumulates in the drip tray, which can be removed completely or partly from the crusher housing for easy take-out of the crushed ice.

Reliable Technology

The milling technology developed by WESSAMAT protects the grinder, reduces the power requirement and minimizes energy consumption.

The fastest way to obtain real crushed ice

Space-saving devices for the production of real crushed ice made from ice cubes. The ideal companion for every ice maker if, in addition to ice cubes, also crushed ice is needed. By help of the integrated grinding mill the ice cubes are turned into crushed ice within seconds. For 3 kg to 5 kg crushed ice per minute. Available in glossy stainless steel, embossed stainless steel (colour anthracite) as well as with individual design.

Ice crusher C 103 in classic gastronomy design with housing made of stainless steel and collection tray made of food-safe plastic

Ice crusher CB 103 with exclusive design housing made of embossed stainless steel (colour anthracite) and collection tray made of food-safe plastic

Ice crusher model CB 105 with housing made of embossed stainless steel (colour anthracite) and collection tray made of food-safe plastic

Technical data and performance

Model	Order No.	Version	Capacity kg/min.	Ice storage kg	Dimensions W(L)xDxDH mm	Performance KW ³⁾	Weight kg ⁴⁾

¹⁾ Housing made of stainless steel; collection tray made of food-safe plastic

²⁾ Housing made of embossed stainless steel (colour anthracite); collection tray made of food-safe plastic

³⁾ Power supply 230V / 50Hz. Special voltages are available on request.

⁴⁾ Net weight

Ideal combination

The ice crushers from WESSAMAT turn ice cubes into real crushed ice within seconds. For this process all kinds of ice cubes from other brands may be used. However, the use of deep-frozen ice cubes should be avoided.

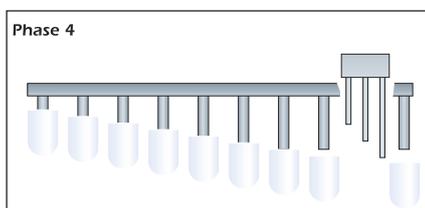

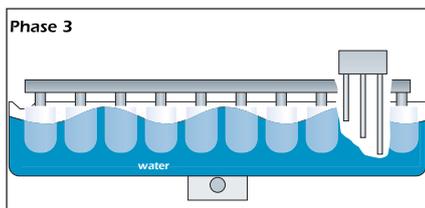

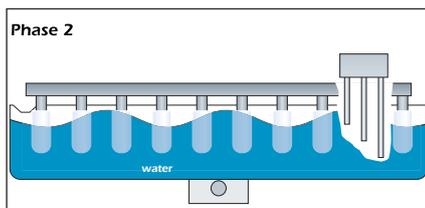

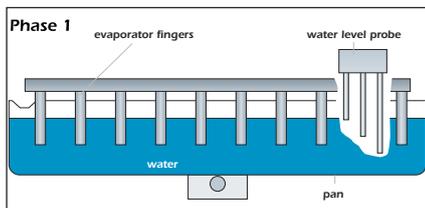

Customized Branding

For promotion and other sales purposes, the housing of the ice crushers can be branded individually.

Crystal clear **Hollow ice cones**

Hollow ice cones are popular among restaurateurs and consumers alike and impress with their special format and crystal-clear look. Ice makers for production of hollow ice cones can be found under the product lines Blue Line, High Line, Top Line, Combi Line, Life Line and Mega Line/Models Z 2000 and Z 2005 (see table of contents "At a glance", page 3).

The perfect wave

The wave technology developed by WESSAMAT is still the ultimate ice production technology (hollow ice cones) in terms of reliability and water compatibility. Even in case of higher drinking water hardness, this unique ice preparation technology ensures the operation of the ice maker without using upstream water treatment.

For producing hollow ice cones, the water trough integrated in the ice maker is filled with fresh tap water before each new production cycle (phase 1).

The water is moved rhythmically by help of a pan motor in precisely calculated wave intervals. (phase 2).

As soon as the hollow ice cones have reached their defined thickness, the ice preparation process is automatically terminated. The minerals and impurities dissolved in the water remain in the trough and are drained with the residual water in a controlled manner (phase 3).

For this emptying process, the pan is brought into a vertical position and hot gas is piped into the evaporator profiles, so that the ice cubes detach and fall into the storage tank (phase 4).

The high reliability and the quality of the ice cubes produced thereby are the main reasons for the positive reputation of this internationally recognized wave technology of WESSAMAT.

Ice preparation technology

Reliable wave technology for the production of crystal-clear, hygienically impeccable hollow ice cones. Even suitable in case drinking water has a high hardness, without using upstream water treatment.

Hollow ice cones

Diameter: approx. 33 mm

Height: approx. 37 mm

Weight: approx. 16 g

Storage bin made of stainless steel

The storage bin is equipped with a double bottom to drain the melting water of the ice cubes in a controlled manner. In comparison to plastic, stainless steel has a positive impact on hygiene and cleaning.

Controlled drainage of residual water

The residual water remaining after the ice cube production will be drained in a controlled manner via the U-shaped draining channels by lowering the water pan. Thus, no ice cube comes in touch with the residual water.

Low-budget ice makers for the production of hollow ice cones

The ideal solution for ice requirements of 22 kg to 46 kg per day (24 h). With integrated storage bin made of stainless steel. The water-cooled models (version W), as well as the air-cooled models (version LE) are fully integratable (see page 23) and suitable for installation into counters or catering furniture.

Ice maker model W 19 L/W

Ice maker model W 19 LE air-cooled version for installation into counters and system furniture

¹⁾ Housing and storage bin made of stainless steel. For special applications all models are also available in V4A stainless steel.

²⁾ At a drinking water temperature of 10°C and ambient temperature of 15°C (for air-cooled machines).

At a drinking water temperature of 10°C and condensing temperature of 20°C (for water-cooled machines).

³⁾ In case of completely filled storage bin.

⁴⁾ All dimensions (height) are including height-adjustable feet (supplied as standard).

⁵⁾ Power supply 230V / 50Hz. Special voltages are available on request.

⁶⁾ Net weight

Ice preparation system:

Wave technology

Cooling method:

L = air-cooling · LE = air cooling (integratable version) · W = Water cooling (also available with separate cooling circuit)

All air-cooled models can be prepared for connection to a remote condenser.

All models may be prepared for connection to a central cooling system.

Required water pressure:

2 – 6 bar

Drinking water quality:

Air-cooled models: max. 25°dH (approx. 750 µs/cm conductivity)

Water-cooled models: max. 15°dH (approx. 450 µs/cm conductivity)

In case of a higher drinking water hardness we recommend the use of softened water.

Drinking Water connection:

Flexible hose connection with 3/4" fitting

Drinking water temperature:

5 - 25°C

Accessories:

Appropriate underframes for the Blue Line ice cubes makers are available (see page 65).

Installation note:

When installing air-cooled models (version L), please ensure to keep sufficient clearance to the side, to the back wall and towards the ceiling (see tender texts and technical data sheets).

Ice preparation technology

Reliable wave technology for the production of crystal-clear, hygienically impeccable hollow ice cones. Even suitable in case drinking water has a high hardness, without using upstream water treatment.

Hollow ice cones

Diameter: approx. 33 mm

Height: approx. 37 mm

Weight: approx. 16 g

Removal hatch made of stainless steel

Removal hatch with inlay in order to avoid forming of condensation water. Easy removal of ice cubes by lateral semi-circular barrier at the inlay of the hatch. Storage bin with LED lighting.

Removable front panels

The removable front panels allow for easy access to the ice preparation technology (front panel above) and to the condenser fins (Fig. front panel below) in case of service, maintenance and cleaning purposes.

Compact ice maker for the production of hollow ice cones

These ice makers have been particularly designed for the integration into counters and systems furniture (see page 24). This particularly slim design is space-saving and ideally suited when there is only little room for installation or already integrated ice makers must be replaced by a fitting model. For an ice requirement of 20 kg up to 55 kg per day (24h). The ice preparation technology and the condenser are easily accessible for servicing and maintenance from the front. All models may also be placed detached as table top device.

Ice cube maker model W 23 LE

Ice cube maker model W 25 LE

Ice cube maker model W 55 LE (for counter integration).
Optionally available with melt water pump.

Integratable ice makers

Space-saving. Environmentally friendly.

For preparing cocktails and long drinks as well as for cooling and serving alcoholic and non-alcoholic beverages, both ice cubes and crushed ice is needed in different quantities at the bar. In order to have both types of ice immediately available, the space-saving integration of this ice maker is the perfect solution. The ice is produced in the proximate working environment and stored in sufficient quantity with a trend going towards air-cooled ice makers, which don't consume any cooling water compared to water-cooled devices, which again saves considerable costs and is good for the environment. Moreover, all integratable WESSAMAT ice makers operate with the climate-friendly refrigerant R 290.

Hollow ice cones

The integratable ice makers of the product lines Blue Line, High Line and Top Line (pages 23-24) produce crystal-clear, hygienically impeccable ice cubes (hollow ice cones) with the reliable WESSAMAT wave technology. With the ice crushers C 103/ CB 103 or C105/CB 105 these hollow ice cones can be transformed into real crushed ice within seconds (see pages 12/13).

Full ice cubes

The integratable ice makers Cube Line IC 70 EL/EW (page 25) work with innovative injection evaporators. This ice production technology forms square full ice cubes in format 30 x 30 x 30 mm and with a weight of approx. 25 g. These ice cubes are particularly famous among barkeepers and restaurateurs due to their typical form and their cooling properties.

Nugget ice

The mechanical crushing of ice cubes for producing real crushed ice cannot be realised with integratable icemakers in counters for spatial reasons. An alternative could be the integratable nugget ice makers NF 80 L/W (see image on the right/detailed product description see pages 50-53).

Integratable ice makers of the product lines BlueLine and TopLine producing hollow ice cones

For the space-saving integration into counters, the air- and water-cooled ice makers of the product lines **Blue Line** (models W 19 LE/W and W 29 LE – W 49 LE) and **Top Line** (models W 21 LE/W – W 51 LE/W) offer individual solutions. These ice makers with capacities of 22 kg – 55 kg ice cubes per day (24 h) work with the reliable WESSAMAT wave technology and have an integrated storage bin made of stainless steel. The integration of the air-cooled version does not require cooling water, which is of ecological advantage and reduces operation costs. Aeration is effected via a cross-flow fan on top and a lateral ventilation grid, which can be removed easily for cleaning purposes.

Integratable ice maker
Product line Blue-Line (detailed product description see pages 16-17)

Integratable ice maker
Product line Top-Line (detailed product description see pages 20-21)

¹⁾ Casing and storage bin made of stainless steel. For special areas of use, the models are also available in stainless steel version V4A.

²⁾ At a drinking water temperature of 10 °C and ambient temperature of 15 °C (air-cooled machines).

At a drinking water temperature of 10 °C and condensing temperature of 20 °C (water-cooled machines).

³⁾ When storage bin is completely full.

⁴⁾ All dimensions (height) given w/o adjustable feet (supplied as standard).

⁵⁾ Power supply 230 V / 50 Hz. Special voltages on request.

⁶⁾ Net weight

Ice preparation system: Wave technology

Cooling method: LE = Air-cooled

W = water-cooled (also available for separate cooling cycle)

All air-cooled models can be prepared for connection to a remote condenser.

All models may be prepared for connection to a central cooling system.

Required water pressure: 2 – 6 bar

Drinking water quality: Air-cooled models: max. 25°dH (approx. 750 µs/cm conductivity)

Water-cooled models: max. 15°dH (approx. 450 µs/cm conductivity)

In case of a higher drinking water hardness we recommend the use of softened water.

Drinking Water connection: Flexible hose connection with 3/4" fitting

Drinking water temperature: 5 - 25°C

Integratable ice makers

Integratable ice makers of the product line HighLine producing hollow ice cones

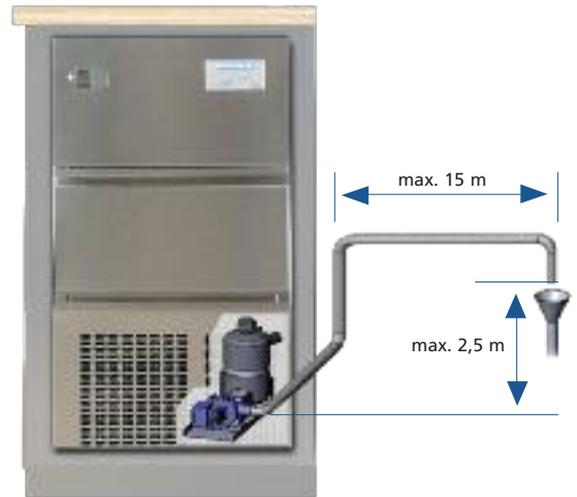

The ice makers of the product line HighLine have been particularly designed for the integration into counters and systems furniture. They operate on the reliable WESSAMAT wave technology and come with an integrated storage bin made of stainless steel. The particularly slim design is space-saving and ideally suited when there is only little installation space or already integrated ice makers should simply be replaced by a fitting model. Aeration is effected via ventilation grills in the front of the casing. The ice makers are easily accessible for servicing and maintenance from the front and available in three performance classes: from 20 kg to 55 kg ice per day (24 h). Particularly beneficial: the model W 55 LE may optionally be equipped with a special feed pump including melt water container. This solution is perfect for all integration situations, in which no or no sufficient gradient between the water drain of the ice maker and the local waste water drain exists (height difference max. 2.5 m; distance between the ice maker and the drain max. 15 m).

Ice maker model W 23 LE for counter integration (see pages 18-19)

Ice cube maker model W 25 LE/W for integration into counters (see pages 18-19)

Ice cube maker model W 55 LE/W with optional melt water pump (detailed description see pages 18-19)

Integratable ice makers of the product line CubeLine producing full ice cubes

Compact ice maker **Cube Line (IC 70 EL/EW)** for cocktail bars, restaurants, hotels and other gastronomy facilities. Not only the water-cooled version, but also the air-cooled version is fully integratable, which means it doesn't consume cooling water and is thus good for the environment. The ice makers of the series Cube Line work with a reliable PLC control and innovative evaporator technology (injection evaporator) and produce ice cubes in square format (size approx. 30 x 30 x 30 mm). Aeration is effected via a ventilation grill in the front. This ice maker has a performance of 65 kg/day (24 h). The integrated storage bin made of stainless steel has a capacity of 36 kg. The air-cooled version IC 70 EL may optionally be equipped with a special feed pump including melt water container. This solution is perfect for all integration situations, in which no or no sufficient gradient between the water drain of the ice makes and the local waste water drain exists (height difference max. 2.5 m; distance between the ice maker and the drain max. 15 m).

Integratable ice maker product series High-Line (model IC 70 EL with optional melt water pump). Detailed product description see pages 36-37.

Integratable ice makers

Integratable ice makers of the product line NuggetLine producing nugget ice

For the production of nugget ice (as alternative for real crushed ice) the ice makers **Nugget Line (NF 80 L/W)** for integration into bars and counters are ideally suitable. Both versions (air- and water-cooled) are fully integratable and produce about 80 kg nugget ice/day (24 h). When installing the air-cooled version, no cooling water is needed, which saves water and reduces operation costs. The ice maker has an integrated storage bin made of plastic on the inside with a capacity of about 25 kg (when completely filled). Aeration is effected via ventilation grills in the front side.

Due to the compact design, the models NF 80 L (air-cooling) and NF 80 W (water-cooling) may be integrated into counters and gastronomy furniture. Detailed product description see page 59.

Technical data and performance

Hollow ice cones and real Crushed Ice

Ice preparation technology

For the production of the hollow ice cones in the models of the Combi Line series of course the proven and reliable WESSAMAT wave technology is used. This ice preparation technology also works with a higher water hardness without pre-treatment of the drinking water. After the end of the production process, the crystal clear hollow ice cones drop either into the storage bin or the downstream crusher module.

Crushed Ice production

The ECL and ECW models of the product series Combi Line have an integrated crusher module. With the crushing technology developed by WESSAMAT, the previously produced hollow ice cones are reliably transformed into real crushed ice. The core of this crushing technology is the grinder made of stainless steel, which is characterized by permanent and reliable function even under heavy load.

Space-saving multi-talent

The ice makers of the series Combi Line are very versatile due to their construction and the different versions.

Hollow ice cones

Diameter: approx. 33 mm
 Height: approx. 37 mm
 Weight: approx. 16 g

Crushed Ice

Demand-oriented production control

In the ECL/ECW models the production of ice cubes or crushed ice can be controlled according to customer's requirements by help of a priority switch positioned in the front panel.

Ice maker for the production of hollow ice cones and real crushed ice

Space-saving compact ice maker for use in cocktail bars, restaurants, hotels and other catering businesses. The ice output is 80 kg per day (24 h). Storage is effected by the integrated bin made of stainless steel. The models W 80 CL/CW only produce crushed ice. In the models W 80 ECL/ECW the production of ice cubes and crushed ice can be controlled according to customer's requirements by help of a priority switch positioned in the front panel.

Ice maker for the production of hollow ice cones or real crushed ice with intermediate storage and mobile storage bin

Powerful ice maker with intermediate storage and mobile storage bin (ice transportation system) for the production of hollow ice cones and real crushed ice. The ice output is 126 kg or 240 kg per day (24 h). The ideal solution when the location of the ice maker and the place of use for the ice cubes or crushed ice are spatially separated from each other. With the mobile storage container (ice transport cart), the ice cubes can be transported quickly and comfortably to the points of consumption (e.g. refrigerated counters).

Ice transport cart, capacity 109 kg

Square **full ice cube**

The square ice cube is the classic model among the ice cubes. It has gained a cult status and is considered the embodiment of a typical ice cube. Ice makers for the production of square-sized full ice cubes can be found with the product series Cube Line (page 36 - 43) and in the product series Mega line/model IC 1500 on page 71.

Innovative ice preparation technology

Ice preparation technology

With this innovative ice preparation technique, the water necessary for the ice production is jetted into a grid-like evaporator via an injection plate. The jetted water gradually freezes into the shape of square-sized full ice cubes. After the end of the production cycle, the defrosting phase is initiated and the square ice cubes dissolve from the grid-shaped evaporator and drop down into the storage bin or the downstream crusher module.

Crushed Ice production

Just as with the ice machines of the product series Combi Line, real crushed ice with an outstanding consistency is made from the full ice cubes by help of the following crushing unit. Here too, the core of the crushing unit is a grinder made of stainless steel, which, permanently and reliably, turns even these square-sized full ice cubes into brilliant crushed ice.

Gefördert durch:

Bundesministerium
für Wirtschaft
und Technologie

Ice cube in classic format

The square full ice cube is considered the embodiment of a typical ice cube among many bar keepers and restaurateurs.

Full ice cube

Format: approx. 30 x 30 x 30 mm
Weight: approx. 25 g

Installation variant

The ice maker IC 70 EL may be fully integrated into counters even in air-cooled version (see page 25).

Storage bin

The integrated storage bin made of stainless steel has a capacity of approx. 36 kg.

Ice maker for production of square full ice cubes

Compact ice maker for cocktail bars, restaurants, hotels and other gastronomy facilities. Not only the water-cooled version, but also the air-cooled version is fully integratable (see page 25). The ice makers of the series Cube Line work with a reliable PLC control and innovative evaporator technology (injection evaporator) and produce ice cubes in square format (size approx. 30 x 30 x 30 mm). This ice maker has a performance of 65 kg/day (24 h). The integrated storage bin made of stainless steel has a capacity of 36 kg.

The ice maker IC 70 EL/EW is equipped with a reliable PLC-control. The current operating states are shown to the user via the digital display in the front panel.

Ice cube maker model IC 130 EL/EW

Technical data and performance

Model	Order No.	Version ¹⁾	Performance kg/24 h ²⁾	Ice storage kg ³⁾	Dimensions W(L)xDxD mm ⁴⁾	Power consumption KW ⁵⁾	Weight kg ⁶⁾
IC 130 EL	2210	Stainless steel	125	60	715/605/1815	0.74	132
IC 130 EW	2211	Stainless steel	125	60	715/605/1815	0.69	132

¹⁾ Casing and storage bin made of stainless steel. For special areas of use, the models are also available in stainless steel version V4A.

²⁾ At a drinking water temperature of 10 °C and ambient temperature of 15 °C (air-cooled machines).

At a drinking water temperature of 10 °C and condensing temperature of 20 °C (water-cooled machines).

³⁾ When storage bin is completely full.

⁴⁾ All dimensions (height) given including adjustable feet (supplied as standard).

⁵⁾ Power supply 230 V / 50 Hz. Special voltages on request.

⁶⁾ Net weight

Ice preparation system:

injection evaporator

Model descriptions:

EL = ice cubes / air cooling · EW = ice cubes / water cooling

Cooling method:

L = Air-cooled / Integratable · W = water-cooled (also available with separate cooling cycle)

All air-cooled models can be prepared for connection to a remote condenser (see page 64).

All models can be prepared for connection to a central refrigeration system.

Required water pressure:

2 – 6 bar

Drinking water quality:

Air-cooled models: max. 15°dH (approx. 450 µs/cm conductivity)

Water-cooled models: max. 15°dH (approx. 450 µs/cm conductivity)

In case of a higher drinking water hardness we recommend the use of softened water.

Drinking Water connection:

Flexible hose connection with 3/4" fitting

Drinking water temperature:

5 - 25°C

Installation note:

When installing air-cooled models (version L), please ensure to keep sufficient clearance to the side, to the back wall and towards the ceiling (see tender texts and technical data sheets).

Ice maker for production of square full ice cubes

This particular high-performance ice maker with injection evaporator produces 240 kg full ice cubes per day (24 h). They have an integrated storage bin made of stainless steel and a PLC-control which ensures high functionality and reliability. Current operating states as well as possible causes for defaults (e. g. lack of water) are shown on the digital display integrated in the front panel. This is the professional solution for producing perfect full ice cubes in case of higher requirements.

The current operating states are shown to the user via the digital display in the front panel.

The models IC 250 EL/EW are also available with ice transport system (intermediate storage and mobile storage bin). They may also be supplied without a storage bin (for combination with existing storage containers or tanks from other manufacturers). Prices are given on request.

Ice maker for production of square full ice cubes and real crushed ice

The models IC 135 ECL/ECW produce square full ice cubes as well as real crushed ice. They have a performance of 125 kg per day (24h). Both types of ice are stored in a tank made of stainless steel with a capacity of 65 kg per type of ice. The integrated PLC control ensures high functionality and reliability. Current operating states as well as possible causes for defaults (e. g. lack of water) are shown to the operator and service staff on the digital display integrated in the front panel.

Ice maker model IC 135 ECL/ECW

The current operating states are shown to the user via the digital display in the front panel.

In the models IC 135 ECL/ECW, the production of ice cubes and crushed ice can be controlled in a demand-oriented manner.

High-performance ice making concept

With the model Cube Line IC 550 ENL/ENW, WESSAMAT offers a high-performance and versatile ice making concept for producing ice cubes and nugget ice. Both types of ice are produced in two separate ice makers, which are mounted on one common storage bin. The square full ice cubes and the nugget ice are stored separately from each other and can be taken out of the container manually.

Square full ice cubes

Because of the typical form and its cooling capacity, the square ice cube is popular among bar keepers and restaurateurs alike. Due to the relatively big mass, the melt water is being released slower during cooling and preparing of beverages, long drinks and cocktails, which creates a longer cooling effect.

Premium nugget ice

With a temperature of -0.5° Celsius, nugget ice has premium cooling properties. It is versatile in use and also suitable for preparing cocktails due to its form and consistency. In case no real crushed ice is at hand, nugget ice is used as an alternative.

Powerful ice production concept for square ice cubes and nugget ice

The ice maker model IC 550 ENL/ENW essentially consists of 3 system components, which together form one functional unit. The ice preparation system with injection evaporator produces 240 kg of square full ice cubes per day (24 h). With an edge length of approx. 30 x 30 x 30 mm and a weight of about 25 g, these ice cubes impress with their typical form and excellent cooling capacities.

The nugget ice maker produces 300 kg of nugget ice per day (24 h), having a temperature of minus 0.5 °C. Because of its consistency, this nugget ice can be used for preparing cocktails as well as for cooling and presenting meals and beverages in displays. The current operating states are shown via the digital displays in the front panel. Storage of both types of ice is effected separately from each other but in a common storage bin made of stainless steel.

Ice making unit for production of square full ice cubes

Ice making unit for production of nugget ice

Storage bin of stainless steel for the separate storage of nugget ice and ice cubes.

Versatile fine ice cubes

Excellent cooling at 0° C

Micro Cube fine ice cubes are perfectly suitable for many applications due to their special properties. With its square format of approx. 7 x 7 x 7 mm, the special consistency and the constant temperature of exactly 0°C, this ice offers unique cooling properties. Ideally suited for applications in the catering and hospitality industry, in food retail and in supermarkets and wherever a gentle, exact cooling of foodstuffs is important, e.g. in displays, refrigerated counters and buffets.

Cooling of fresh fish and seafood

Micro Cube fine ice cubes are ideally suitable for cooling and presentation of fish and seafood.

Beneficial properties

Micro Cube fine ice cubes have a uniform grain size, do not glaciare and also don't form any lumps when mixed with water. This guarantees an ideal cooling and a perfect presentation over a long period of time. Even during extended storage, Micro Cube fine ice cubes remain easy to pour and do not stick to the commodities to be cooled. All this makes the Micro Cube fine ice cubes the perfect cooling medium during the sausage and baked goods production as well as in many other areas of application.

Production of pastries

When adding Micro Cube fine ice cubes instead of cold water, a more effective cooling of the dough may be achieved.

Cooling of fruits, meals and beverages

Micro Cube fine ice cubes are the perfect basis for the presentation of fruits, juices, milk and fresh products

Micro Cube fine ice cubes

Format: approx. 7 x 7 x 7 mm

Cooling of vegetables and asparagus

The Micro Cube fine ice cubes are perfectly suitable for the gentle cooling of asparagus and other vegetables

Ice preparation technology

With this unique ice preparation technique tap water is cooled down to 0°C in a freezing cylinder. The ice produced as a result is compressed through a press core. This forms the special shape of the square fine ice cubes, which then drop down into the storage bin.

Ice machines for the production of fine ice cubes

Universal ice maker for the production of fine ice cubes with a square format. Ideal for use in the catering trade, for refrigerated counters and displays in food retail and supermarkets, for medical and laboratory applications as well as for the manufacture of bakery and sausage products. For an ice output of 120 kg up to 800 kg per day (24 h). With integrated storage bin made of stainless steel. Ideally suited for connection to climate-friendly CO₂-compound systems.

All models of the Micro-Cube ice makers are equipped with a reliable PLC-control. The current operating states are shown to the user via the digital display in the front panel.

Drinking Water connection:

Flexible hose connection with 3/4" fitting

Drinking water temperature:

5 - 25°C

Installation note:

When installing air-cooled models (version L), please ensure to keep sufficient clearance to the side, to the back wall and towards the ceiling (see tender texts and technical data sheets).

The ice transport carts (Order No. 5520) are available with or without removable totes (Order No. 5510) and also available separately as accessory (see page 65).

Ice maker for producing fine ice cubes with stationary storage bin for connection to climate-friendly CO₂-compound systems

Ice maker for producing fine ice cubes in square format. Ideally suited for connection to compound systems with climate-friendly refrigerant 744 (CO₂ / GWP value 1). For use in food retail and in supermarkets, for refrigerated counters and food displays as well as use in production of pastries and sausage products. The capacity is from 120 kg to 800 kg per day (24 h). They have an integrated storage bin made of stainless steel.

All models of the Micro-Cube ice makers are equipped with a reliable PLC-control. The current operating states are shown to the user via the digital display in the front panel.

Ice cube maker model M 200 Z-CO₂

Technical data and performance

Model	Order No.	Version ¹⁾	Performance kg/24 h ²⁾	Ice storage kg ³⁾	Dimensions W(L)xDxDxH mm ⁴⁾	Power consumption KW ⁵⁾	Weight kg ⁶⁾
M 120 Z-CO ₂	5199	Stainless steel	120	100	605/605/1690	0.30	104
M 200 Z-CO ₂	5334	Stainless steel	200	175	805/605/1795	0.55	121
M 400 Z-CO ₂	5248	Stainless steel	400	250	805/605/2145	0.55	136
M 800 ZP-CO ₂ ⁷⁾	5379	Stainless steel	800	***)	800/605/540	0.80	94

¹⁾ Casing and storage bin made of stainless steel. For special areas of use, the models are also available in stainless steel version V4A.

²⁾ At a drinking water temperature of 10 °C and ambient temperature of 15 °C (air-cooled machines).

At a drinking water temperature of 10 °C and condensing temperature of 20 °C (water-cooled machines).

³⁾ When storage bin is completely full.

⁴⁾ All dimensions (height) given including height-adjustable feet (supplied as standard).

⁵⁾ Power supply 400 V / 50 Hz. Special voltages on request.

⁶⁾ Net weight

⁷⁾ The model M 800 ZP-CO₂ is supplied without integrated storage bin! It can be combined with the storage bin B 750 (see page 73) or the ice transport systems ITS 700 / ITS 1350 (see page 57). Prices given on request.

Ice preparation system:

Freezing cylinder with a spiral conveyor and press core

Cooling method:

Z = connection to a locally existing CO₂-compound system

Required water pressure:

2 – 6 bar

Drinking water quality:

In case of a drinking water hardness of more than 10 ° dH (about 300 µs/cm conductivity), the use of partially desalinated water by the WESSAMAT-reverse osmosis system is recommended (see page 66).

Drinking Water connection:

Flexible hose connection with 3/4" fitting

Drinking water temperature:

5 - 25°C

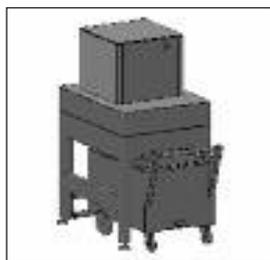

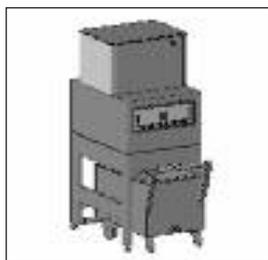

Installation note:

For installation you must absolutely consider the operating manual as well as the technical data sheet.

Ice maker for producing fine ice cubes with mobile storage bin for connection to climate-friendly CO₂-compound systems

Ice maker for production of fine ice cubes in square format. Ideally suitable for the connection to compound systems with climate-friendly refrigerant R 744 (CO₂ / GWP value 1). The practical solution for distributing the fine ice cubes to various points of consumption, e. g. restaurants, service areas or supermarkets. Capacities range from 120 kg up to 800 kg per day (24 h). Ice storage is effected in the intermediate bin as well as in the transport cart. Perfect for connection to climate-friendly CO₂-compound systems.

Laboratory and medical technology

Flake ice is of versatile use in terms of cooling purposes in the laboratory and in the medical field.

Flake ice

Flake ice is appropriate for a variety of applications and cooling tasks, due to its shape, consistency and temperature. With a temperature of minus 0.5°C the crystalline, irregularly shaped ice flakes are of versatile use.

Sauna and spa

In sauna and spa areas flake ice is used for ice fountains and infusions.

Ice preparation system

By feeding it with water, a thin ice layer is being formed on the inside wall of the freezing cylinder. The spiral conveyor continuously transports the ice upwards to the outlet of the freezing cylinder, where crystalline ice flakes are formed.

Ice maker for producing flake ice with integrated storage bin

Space-saving compact machines for production of 40 kg to 175 kg of flake ice per day (24 h). Available in air-cooled and water-cooled version. For the economic production of flake ice to be used in laboratories, hospitals, bakeries and restaurants, with cultivators of asparagus and other vegetables as well as in the areas of sauna and spa of hotels and baths.

NuggetLine | Nugget ice makers

Cocktail preparation and presentation

Nugget ice is used as an alternative to real crushed ice when preparing cocktails or presenting food and beverages.

Nugget ice

Due to its form, consistency and temperature, nugget ice is appropriate for various fields of application. With a temperature of minus 0.5°C, the crystalline, irregularly shaped nugget ice is of versatile use.

Production of pastries

By adding nugget ice instead of cold water, a more effective cooling of the dough is reached.

Ice preparation system

By feeding water into the system, a thin ice layer forms on the inside wall of the freezing cylinder. The screw conveyor pushes the ice continuously towards the exit of the freezing cylinder which results in crystalline nugget ice.

Ice maker for producing nugget ice with integrated storage bin

Meant for the production of nugget ice with a temperature of -0.5°C . The ice capacity is ranging between 80 kg and 175 kg per day (24 h). Due to its consistency, nugget ice is an alternative to crushed ice and can be used e. g. for the preparation of cocktails or cooling and presenting food and beverages. In the pastries production, nugget ice is particularly well suited for cooling the dough. The models NF 80 W/L may be fully integrated into counters and gastronomy furniture (see page 26).

Due to the compact construction, the models NF 80 L (air-cooled) and NF 80 W (water-cooled) can be mounted into counters and gastronomy furniture. Nugget ice maker model NF 80 L/W with integrated storage bin.

Nugget ice maker model NF 80 L/W with integrated storage bin.

ScaleLine | Scale ice maker

Meat processing and sausage production

In meat-processing industries scale ice is used when preparing the sausage meat.

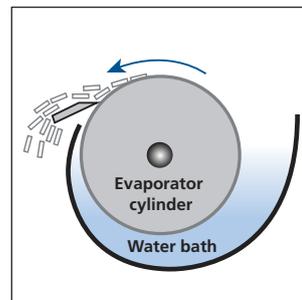

Scale ice

Due to its constant temperature of -6°C to -8°C , scale ice is predominantly used for cooling foodstuffs, such as fresh fish, as well as in the field of meat processing.

Cooling of fresh fish and seafood

When presenting fish and seafood, scale ice is used as an alternative to fine ice cubes and flake ice.

Ice preparation system:

By rotating in water, a layer of ice is formed on the surface of the evaporator cylinder. During the rotation process, this ice layer is continuously scraped off from the surface of the evaporator cylinder, resulting in cool, dry ice shards of different shapes and sizes.

Ice machines for the production of scale ice

Compact devices with integrated, stationary or mobile storage bins for the production of 80 kg up to 400 kg scale ice per day (24 h). For use in the fish processing industry and in butcher shops, in market halls and refrigerated counters of supermarkets, as well as in food retail. The ice makers are equipped with an electronic control and digital display to indicate the operating conditions.

Scale ice maker model HW 200 / HW 400
(Production unit without storage bin)

Scale ice maker
Model HW 85 L / 125 L

Technical data and performance

Model	Order No.	Version ¹⁾	Performance kg/24 h ²⁾	Ice storage kg ³⁾	Dimensions W(L)xDxH mm ⁴⁾	Power consumption KW ⁵⁾	Weight kg ⁶⁾

HW 400 WP ⁷⁾	2127	Stainless steel	400	–	750/650/770	1.80	110

¹⁾ Housing and storage bin made of stainless steel. For special applications all models are also available in V4A stainless steel.

²⁾ At a drinking water temperature of 10°C and ambient temperature of 15°C (for air-cooled machines).

At a drinking water temperature of 10°C and condensing temperature of 20°C (for water-cooled machines).

³⁾ In case of completely filled storage bin.

⁴⁾ All dimensions (height) given including feet.

⁵⁾ Power supply 230 V / 50Hz. Models HW 400 L/W/LP/WP: 400V/50Hz. Special voltages are available on request.

⁶⁾ Net weight

⁷⁾ Production units (without storage bin), to be used in combination with stationary or mobile storage bins. Prices on request.

Ice preparation system:

Rotating evaporator cylinder

Cooling method:

L = air cooling · W = water cooling (the models HW 85 and HW 125 are available with separate cooling circuit on request / the models HW 200 and HW 400 have this as a standard)

The model HW 400 may be prepared for connection to a central cooling system (e.g., climate-friendly CO₂-compound system).

All air-cooled models can be prepared for connection to a remote condenser (see page 64).

Required water pressure:

2 – 6 bar

Drinking water quality:

In case of a drinking water hardness of more than 30 °dH (about 900 µs/cm conductivity) the use of softened water is recommended.

Drinking Water connection:

Flexible hose connection with 3/4" fitting

Drinking water temperature:

5 - 25°C

Installation note:

When installing air-cooled models (version L), please ensure to keep sufficient clearance to the side, to the back wall and towards the ceiling (see tender texts and technical data sheets).

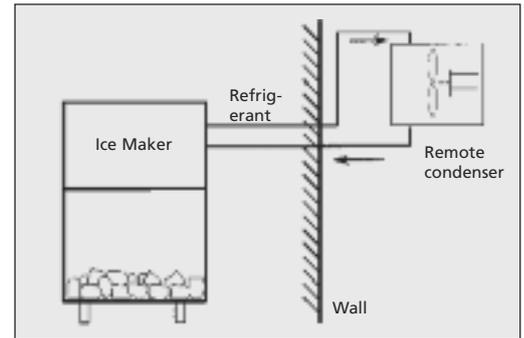

Scale ice makers with higher performances and individual storage bins are available. Technical specifications and prices on request.

Accessories for ice makers

Remote condenser

If you plan to use an air-cooled machine but do not wish to have an additional source of heat emission, we recommend installing a remote condenser (split condenser) on the outside area. In the following table you will find condensers including speed controller and wall brackets for different types of ice makers. Prices for other types of condensers, speed controllers and wall brackets are given on request.

Air-cooled ice maker with remote condenser

Condenser	Order No.	for connection to ice maker ³⁾		
Type 0 ¹⁾	12925	W 80 CL	W 80 ECL	W 81 L IC 70 EL

¹⁾ condenser, horizontal airflow

²⁾ condenser, vertical airflow

³⁾ Information on remote condensers for models that are not listed are given on request.

Coloured coating

In order to have a universal design or for realizing individual customer's wishes regarding colour, most of the WESSAMAT models may be supplied with a powder-coated casing in all standard RAL-colours. Contact us to learn more about which models may be powder-coated with individual colours. Prices and lead times are given on request.

Special cleaner

The WESSAMAT special cleaner for effective cleaning and disinfection of ice makers. Ready-to-use solution for quick and sustainable removal of impurities (e. g. lime) and bacteriological contaminations.

Special cleaner in plastic bottle with a spray cap

Special cleaner	Order No.	Packaging Unit
Plastic bottle with spray cap	5007	4 x 1 litre-bottles
Plastic container with screw cap	5008	1 x 30 litre container

Underframes for ice makers

This is the practical solution in case ice makers should be mounted in a certain height. These underframes made of high-class stainless steel enable the cleaning of the floor at the installation site of the ice maker and facilitate ice take-out due to the elevated position. Fitting underframes in different heights are available for the series Blue Line, High Line, Top Line and Smart Line. Prices are given on request.

Ice scoop with protection bracket

For hygienic ice take-out from the storage bin of the ice maker. The handle protects from injuries that may be caused by the frozen ice and ensures that the hands don't come in contact with the ice when retrieving it. The protection bracket can be fixed to the wall by suction cups or permanently with screws. The protection bracket as well as the ice scoop are dishwasher-safe and may be washed by hand or by machine.

Model	Order No.	Version	Weight kg	Scoop volume ml	Dimensions W(L)xDxH/mm
Ice Scoop type M Including protection bracket ¹⁾	19808	Polycarbonate/ Tinted blue	0.70	175 – 300	115/155/270
Ice Scoop type M Without protection bracket	20006	Polycarbonate/ Tinted blue	0.25	175 – 300	92/95/270
Ice Scoop type XL Including protection bracket ¹⁾	19809	Polycarbonate/ Tinted blue	1.50	1,900 – 2,500	180/220/400
Ice Scoop type XL Without protection bracket	20007	Polycarbonate/ Tinted blue	0.45	1,900 – 2,500	170/160/390

¹⁾ For temporary fixation of the protection bracket onto the ice cube maker or for permanent fixation on the wall, the delivery includes: 2 x suction pads, 1 x wall holder with slotted holes, 1 x metal holder.

Ice transport carts

As complement to the stationary ice makers, these ice transport carts can serve as mobile storage bins. They are ideally suitable for transporting the produced ice quickly and conveniently to different consumption areas (e. g. refrigerated counters or fruit, juice and salad bars).

Model	Order No.	Version	Volume kg	Dimensions W(L)xDxH/mm
Ice transport cart Smart Cart 240	5520	Polyethylene	109	625/1055/905
Insert containers/totes for Smart Cart 240 ¹⁾	5510	Polyethylene	68 ²⁾	–

¹⁾ Totes (6 pieces per set) including fold-away holder for easy handling

²⁾ When using the totes, the capacity of the Smart Cart 240 is reduced from 109 kg to 68 kg (6 totes à 11.3 kg).

Water treatment for ice makers

Meltwater and residual water pump type E

This high-performance pump is used to transport meltwater from the storage bin and residual water from the ice production into a higher positioned water drain. This pump must be connected externally and is suitable for all ice makers with a capacity of up to 250 kg/24 h. The melt- and residual water is accumulated in the container of the pump (container volume 1.7 l) and conveyed into a drain up to a maximum height of 5 m. The container volume is not sufficient for collecting the melt- and residual water in case of a pump breakdown. In order to prevent the container from overflowing in case of a failure, the control contact of the pump can be connected to the ice maker. In the event of a breakdown, the ice maker will be turned off automatically. However, this requires an additional relay, which is not included in the scope of delivery.

Modell	Order No.	Dimensions W(L)xDxH/mm	Container volume litre	Pumping quantity (litre/h)	Delivery head max. meters	Power cons. ¹⁾ (kW)	Weight ²⁾ (kg)
Type E	24611	285/134/144	1.7	550	5.0	0.56	1.65

Drain connection: 6 or 10 mm (depending on the ice maker capacity). Voltage 230 V / 50 Hz. Protection type: IP 24 splash-water proof. The pump must be connected to a separate socket with permanent current (230 V/50 Hz) and be separately fused.

3K-Multi-component filter

These filter cartridges are especially suitable for water filtration in conjunction with the use of ice machines. The multi-component filter system of membrane filters, activated carbon and lime stabiliser removes suspended particles, chlorine, odouring and flavouring substances. It reduces microbiological contamination (99.9% reduction of bacteria, E. coli and pseudomonads) and lime deposits in the ice maker. For the initial installation, a connection set with all the necessary fittings and hose connections is available. There are two water filter cartridges with different power ratings. Depending on the flow rate and water quality, the filter cartridges should be replaced at least every 12 months.

Model	Order No.	Dimensions (Ø x H)	Capacity (litres)	Flow Rate (litres / min.)
Connection set type 1 + 2	25435	-	-	-
Connection kit type 1 + 2 SK ¹⁾	26574	-	-	-

Filter cartridge type 2	25191	102 x 600	204,412	18.9

¹⁾ For water-cooled ice makers with separate cooling cycle · ²⁾ Including wall support

Ozonation unit

Ozone is a natural, highly effective disinfection agent in line with the German Drinking Water Ordinance (TrinkwV, section 11) and approved by the food industry. The Clean-Ice-DF[®] is integrated into the water supply of the ice maker. In order to protect the ozonation unit from contaminants and particles in the tap water, we recommend using an upstream 3K-Multi-component filter. The ozonation unit Clean-Ice-DF[®] reduces germs and bacteria by up to 99.99% (LOG 5). Harmful biofilms are eliminated and their new formation permanently disabled. The operating statuses are displayed by light emitting diodes. During maintenance of the machine, the ozone cell should be replaced semi-annually. Suitable for drinking water with a total hardness of 13° dH, a temperature of up to 32°C and an ambient temperature of up to 43° C.

Model	Order No.	Dimensions (Ø x H)	Water flow (litres / min.)	Line voltage	System voltage
Clean-Ice-DF [®]	25680	75 x 220	0.4 - 4.0	240 V / 50-60 Hz	28 V / 0.5 A
Ozone cell (Exchange)	25681	-	-	-	-

Reverse osmosis system UO 400

Compact, particularly low-cost reverse osmosis system for the treatment of drinking water. The minerals dissolved in the drinking water (e. g. lime) are removed and deposits in the ice preparation system are avoided. The mix of the treated water with the existing tap water to a residual salt content of approx. 150 $\mu\text{S}/\text{cm}$ creates optimal preconditions for the operation of the ice maker. The performance of the reverse-osmosis-system is sufficient for the operation of ice makers with a capacity of up to 400 kg / 24 h. All components including pre-filter, membrane, pressure tank and dilution device are integrated in a closed housing with height-adjustable feet. All hose fittings are equipped with the John-Guest-system.

Model	Order No.	Dimensions ¹⁾ W(L)xDxH/mm	Performance (litres/h)	Weight ²⁾ (kg)
UO 400	27649	760/300/760	17	60

¹⁾ w/o height-adjustable feet (150 - 170 mm) · ²⁾ Net weight
 Drinking water connection: R 3/4" · Hose fittings: John-Guest-System

Reverse osmosis system UO 600 / UO 1200

For the treatment of drinking water with a high total salt content. For the reliable operation of ice machines, the use of demineralised water with adequate residual salt content (approx. 150 $\mu\text{S} / \text{cm}$) is the only solution in order to permanently prevent corrosion on the one hand and the formation of lime scale deposits on the other hand. For this purpose, this special reverse osmosis system was designed, tailored to the needs of ice machines in terms of filter components, water quality (residual conductivity), water pressure, flow rate and overall performance. The compact systems are available in two power classes and are supplied in a closed cabinet including electronic control and display (with the possibility for remote inquiry). All hose fittings are equipped with the John-Guest-system.

Model	Order No.	Dimensions ¹⁾ W(L)xDxH/mm	Performance (litres/h)	Power consumption ²⁾ (kW)	Weight ³⁾ (kg)
UO 600	26012	760/300/760	30	0.1	70
UO 1200	26345	760/300/760	60	0.1	70

¹⁾ w/o height-adjustable feet (150 - 170 mm) · ²⁾ Power supply 230 V / 50 Hz · ³⁾ Net weight
 Drinking water connection: R 3/4" · Hose fittings: John-Guest-System

Experience for all senses

The crystal-clear hollow ice cones with their aesthetic form are very popular for use in the private sector.

Hollow ice cones

Diameter: approx. 33 mm

Height: approx. 37 mm

Weight: approx. 16 g

Sophisticated design

The ice maker Life Line W 20 with its clear lines and state-of-the-art design can be perfectly integrated into modern kitchen and living room furnishings. The blue LED for illumination of the ice cubes in the storage tank is an impressive detail.

Professional technology

The product line Life Line is also using the reliable WESSAMAT wave technology for the production of ice, just like the ice machines for the gastronomy.

Ice makers for exclusive kitchens and residential facilities

These devices with professional ice preparation technology have been developed for use and integration into kitchen and living room facilities. The perfect solution for those who don't want to do without hygienically impeccable ice cubes in their private surroundings (kitchen, apartment, yacht, holiday residence). The ice capacity is 15 kg per day/24 h. The integrated storage bin holds 5 kg of ice cubes. The integration format was adapted to the traditional niche dimensions for kitchen appliances. Easy installation is ensured by the slide-in frame included in the scope of delivery. As an alternative to the standard integration version, this ice maker is also available as table-top version for detached installation.

Ice maker W 20 W, front panel made of stainless steel with slide-in frame for integration into kitchen facilities.

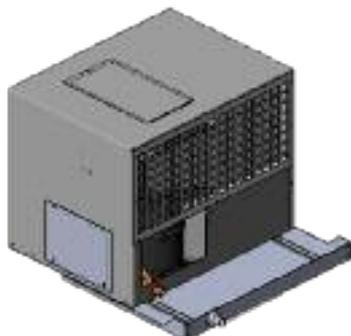

Ice maker W 20 WS-B, housing made of embossed stainless steel, colour anthracite. Table-top version with height-adjustable feet for levelling.

Powerful and energy-efficient plant concepts

Besides the development and production of ready-to-use ice makers, WESSAMAT is also your competent address when it comes to high-performance plants and complete solutions for the production, intermediate storage, filling and weight-precisely bagging of hollow ice cones, full ice cubes, tube ice or crushed ice. Innovative, powerful technology as well as a vast know-how about the production and packaging of different types of ice are key conditions for being successful in this global market.

For companies with a high own demand, for the supply of large-scale consumers or for the commercial sale of different types of ice, WESSAMAT can offer individual and energy-efficient ice preparation concepts for the fishing industry, for producers of packaged ice, for the inflight catering on international airports and other branches, where particular types of ice are required in bulk quantities and in packaged form. In the bounds of industry and customer-specific solutions, performances ranging from 1 ton up to 100 tons per 24 h may be realised with different ice plants and system components.

Individually designed WESSAMAT conveyor technology with automatic filling and bagging unit for ice cubes and crushed ice

Ice production with semi-automatic filling of hollow ice cones for the inflight catering

High-performance ice preparation plant IC 1500 with belt conveyor system and filling unit for square full ice cubes

Model IC 1500 L/W

Ice makers for the production of square-sized full ice cubes

This innovative and energy-efficient compound system concept is using the waste heat resulting from the ice production for the thawing process, which is usually drained off unused with single-evaporator systems. A total of 12 injection evaporator systems work time-lagged in order to produce 1,500 kg of ice cubes within 24 hrs. With a minimum use of fresh water an extraordinarily high efficiency rate is achieved as well as a reduced energy consumption by approx. 20 % when compared to ice preparation plants with traditional evaporator technology. Details, performance data and prices are given on request.

PATKOL-WESSAMAT ice preparation plant PK 10 AU for the production of crystal clear tube ice. The ice preparation plant model PK 10 AU can be seen when paying a visit to the WESSAMAT competence centre where you can experience the ice production including conveying system and filling technology live (see page 75).

PATKOL-WESSAMAT models PK 10 AU and PK 25 AU for the production of tube ice

In cooperation with PATKOL, WESSAMAT is offering powerful plant installations for the production of tube ice to end users with a particularly high demand of ice cubes. This ice may be tailored to the individual requirements of the customer with regard to length and diameter. Already in the bounds of project planning, the desired diameter between 16 mm and 47.8 mm is predefined. At the output of the evaporator, the tube ice is cut to the desired length between 40 mm and 50 mm. These ice cube plants are available with performances of 10 to 140 tons/24 h. Suitable system components for conveying, storing and filling of tube ice are also available. Details, performance data and prices are given on request.

Ice cube dispenser D 705 / D 720 / D 2005

Dispenser with integrated conveyor system and semi-automatic, interval-controlled loosening unit. Capacity 480 kg. Compatible with ice preparation units for storing and filling of hollow ice cones. The Dispenser model D 720 disposes of a crusher unit integrated in the filling station head and thus allows for the filling of hollow ice cones and crushed ice. For the filling into portions between 1 kg and 5 kg, the requested weight is factory pre-set. Alternatively, dispensing of the ice can also be carried out manually by a foot switch. A PLC control for dispenser, dispensing unit and the compatible ice preparation modules offers a high degree of functionality and reliability. Technical specifications and prices on request.

Filling station for ice cubes

Semi-automatically controlled filling unit for weight-precise filling of ice cubes. This filling station can be combined with Dispensers D 705 / D 2005 or a storage bin with conveyor belt for transporting the ice. The perfect solution for all users with smaller quantities where a fully automatic bagging unit is not cost effective in proportion to the produced ice. Suitable for use in combination with WESSAMAT storage conveyor systems or other brands of ice makers. Technical specifications and prices on request.

High-performance crushing unit

If, in addition to ice cubes, also crushed ice is required for specific customer plant applications, high-performance crushers may be integrated into the overall concept in the bounds of project engineering. The robust grinders are electronically controlled and turn the previously produced ice cubes into real crushed ice with brilliant visual appearance and excellent consistency. Suitable for processing all traditional types of ice, such as hollow ice cones, full ice cubes, tube ice etc., up to a crushing performance of maximum 60 kg/minute. Details, performance data and prices are given on request.

Individual system components tailored to the respective application with regard to version and performance are available. Prices and performance data are given on request.

Conveyor systems and transport belts

After production, the ice cubes must usually be further processed. In the bounds of complete solutions, individual storage and conveying systems such as transport belts must be integrated to transport the ice towards a freezer (dryer), an ice crusher unit, a filling station or a bagging machine. For this purpose, WESSAMAT offers individual solutions (from 3 m to 18 m conveying distances), which are customized for each application case and planned into the complete configuration of the plant beforehand. These conveyor systems and transportation belts are constructed in a way, that they meet the highest standards for cleaning and hygiene. Details, performance data and prices are given on request.

Volumetric packaging machine

For the filling and packaging of ice cubes and crushed ice, suitable tubular bag and packaging machines are available for large-scale consumers or for the commercial sale. These electronically controlled systems can be integrated into new or already existing production plants. When selecting the most suitable type of tubular bagging machine, customer-specific parameters, such as the desired quantity to be filled, the type of ice and the requested portion sizes/bag contents must be taken into account. Details, performance data and prices are given on request.

Experience live industrial ice production

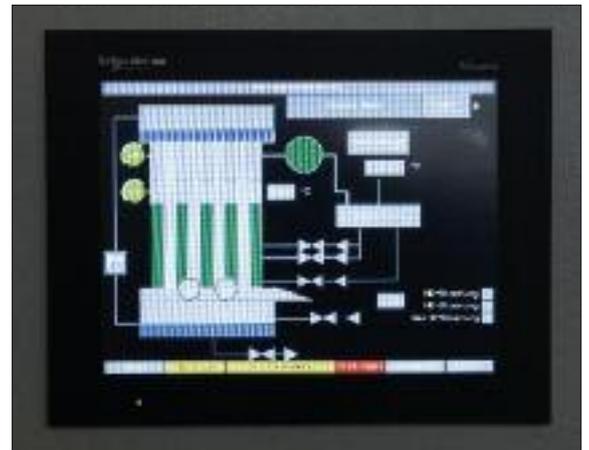

At the competence centre in Kaiserslautern (factory site), potential buyers can convince themselves of the dimension and functionality of high-performance ice preparation plants. Here, you can experience different production plants with various ice preparation technologies as well as system components for storing, transporting and filling of different types of ice live and in real-time. No matter if you are interested in crystal-clear hollow ice cones, classical full ice cubes, perfect tube ice or brilliant crushed ice – in our competence centre we will demonstrate you the technical possibilities and quality of various types of ice and their individual features.

Take advantage of our experience and expert knowledge when it comes to preparing, project engineering and realising major projects and complete ice factories. Visit our competence centre in Kaiserslautern and obtain information about innovative technologies and the latest developments regarding industrial ice preparation and production of packaged ice. Located in a central area of Germany, you can reach us easily by car, train or plane. We are also able to arrange a shuttle service to the train station Kaiserslautern or to the Airport Frankfurt.

We are looking forward to your visit.
